

1. Run the Phuoc_Le_db script to get all the tables with some data.
2. Open the My SQL workbench and connect it to a local server
3. Open the file and use terminal to cd to the client folder
4. Run the command 'npm install' and then run the command 'npm start'
6. Open another terminal, then cd to server folder to move to the Server folder
7. Use the newly created terminal to run another command 'node index.js'
8. Everything should work fine and a web will open with Create Account and Login buttons

NOTE: if having a problem connecting to the local database, one solution is to run sql line below in My SQL work bench. ALTER USER 'root'@'localhost' IDENTIFIED WITH mysql_native_password BY 'password';

Where root as your user localhost as your URL and password as your passwor Then run this query to refresh privileges: flush privileges;

Login Instruction: Apparently, in the database, we only have data for PlayerId 1, PlayerId 2, PlayerId 3. So, new accounts do not have all data to perform functionalities of our app. So, please use Username and password below for testing

Username	Password
Ronalddonald	ronnyPassword
Messi1	MessiPassword
Kakakaka	kakaka
